Opening Up Low Power AM to the public:

One other consideration for expanding Travelers Information Stations, TIS, AM radio is to open-up the AM Broadcast Band to Low Power AM service, LPAM, to the public, much like what has been done with Low Power FM service, LPFM. Using TIS Stations as a technical model, such LPAM stations can serve in the very congested metro areas, where LPFM is considered unavailable. Yes, the National Association of Broadcasters, NAB, will fight this tooth and nail. They already have. However, with commercial interests abandoning, and shutting down, AM stations more and more, the NAB practically has no legs to stand on here. Albeit, they should still have input on the subject. Therefore, applying the non-commercial programming of existing LPFM tactics, to an LPAM, using TIS-like techniques, would not only be seen as a ‘no brainer’, but a win / win to those that wish for programming of an LPFM station, and those that want to apply revitalization of the AM Broadcast Band. I hope that the preceding maybe considered. Thank you.
